

## PRESS RELEASE

SAN ANTONIO, TX. March 16, 2007 – Prism Data Systems, Inc. a leading provider of restaurant back office applications and POS support systems, today announced a joint marketing agreement with XFormity, Inc. of Dallas Texas.

XFormity provides web-based business intelligence and balanced scorecard solutions for multi-unit restaurant operators. These solutions allow all levels of management access to information that enhances the decision making process for restaurants operations.

The addition of XFormity's QSRx™ product to Prism's product line will provide another way for Prism to support its restaurant customers. Prism provides the PASEO™ back office application that retrieves, stores and reports critical operational data from the POS System in the restaurant. It will transmit this data to the above store level for integration into the XFormity product for consolidation and reporting on all units within the chain. Prism also supplies a product for the production and editing of menus, inventory and recipes for the restaurant's POS terminals.

"We have been impressed with the XFormity product and the value it provides to customers. We anticipate that the integration of our respective product offerings will enhance our joint customer's ability to manage their business more profitably," said Larry Ohls Vice President of Sales for Prism Data Systems.

"XFormity is pleased to work side-by-side with Prism in delivering a complete package that offers clear advantages in total restaurant management," said Drew Seale, Chief Technology Officer of XFormity. Mr. Seale adds "Customers who leverage the integrated solution will see a synergistic increase in productivity of the complete system."

About Prism Data Systems: Founded in 1989, Prism has been providing Back Office, Head Office and Menu Editing solutions to restaurants for over 15 years. Prism has installed its PASEO™ Back Office System in over 2000 corporate and franchised restaurants. Prism's mission is to provide products and services that allow our customers to move information from the Point of Sale to the Point of Decision.
